November 28, 1990

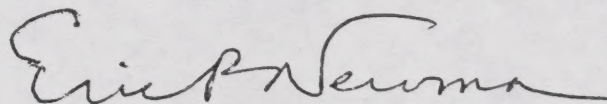

Dear Dick,

Enclosed are 7 more reproductions of the 1000 mill Novas described somewhat in the attached list. We have studied only the "holed" one and enclose comment. You already have two other nice ones from us. All of these are borrowed.

Please photograph them and send prints. Please let us have any further comments when you compare them to those you already have assembled.

As I pointed out I am unable to find any hole on one side of the Hatchell rubbing although the other side has a clear circular depression. Do you find anything on your copies of the rubbing ?

Very truly yours,

A handwritten signature in cursive script, reading "Eric P. Newman". The signature is fluid and extends to the right.

Eric P. Newman

Reproductions of 1000 Mill Nova

1. Silver hole plugged.
2. Silver plated with "COPY BECKER" on edge.
3. Silver gray cast with "COPY" on edge.
4. Small size dark copper finish. Third 0 in 1000 is defective on left side.
5. Dark copper plated finish.
6. Silver plated finish with peeled off area exposing soft metal.
7. Silver plated electro showing joinder line on edge.

1783 Nova 1000 mill reproduction

Weight 14.35 grams.

Specific gravity 10.32 .

Silvery color. Dull gas bubbled field on denomination side. Has a filled circular 1/8 th inch diameter hole between the A of NOVA and C of CONSTELLATIO on one side and through the lower part of L in LIBERTAS and touching the leaf below on the other side. The hole is about 3/32 inches from the edge.

Plain edge. No joinder line shows. Vitrually no beading shows on border.

Compared to the piece sent by Breen to me in 1959:

- a) Hole is in a different place
- b) Webbing in leaves not present
- c) The B is deformed with the same extra lower loop.
- d) The specific gravity is greater and is the same as silver.

The appearance is dull and weak.

Weight in water 12.96 grams.
